

NaturClean

Keeping animals comfortable and clean will improve their performance and reduce the risk of poor health. Damp bedding should be avoided – it provides ideal conditions for bacteria to grow which then present a risk to animals. A bedding conditioner will remove moisture and provide the animal with a clean, dry environment. The opportunity for bacterial infection will also be reduced.

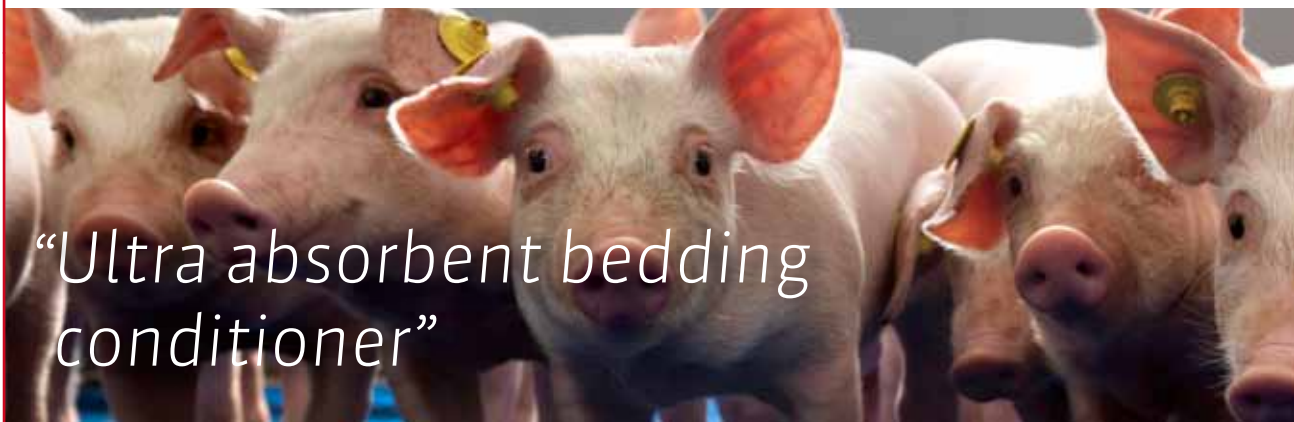

Product

NaturClean is a natural mineral with exceptional levels of absorbency and contains a highly effective disinfectant. Used as a powder, it is convenient, easy to apply and environmentally friendly.

Advantages

NaturClean absorbs moisture and kills bacteria, protecting the animal from pathogenic bacteria, viruses and fungal infections. As a buffering material it helps to keep bedding pH neutral which ensures the product is a non irritant to delicate tissues. The neutral pH also improves slurry breakdown and reduces odour.

In farm trials NaturClean has been shown to out-perform its competitors in its absorbency. NaturClean particles have a surface area 10 times that of lime. It also has a greater ability to significantly reduce bacterial numbers and other major infectious agents.

“Ultra absorbent bedding conditioner”

provimi

shaping tomorrow's nutrition

Benefits

NaturClean offers:

- A cleaner, drier and more comfortable environment for animals
- Reduced threat of disease
- Improved breakdown of manure
- A safer and pleasanter environment for animals and operators

How to use

Sprinkle onto the floor after cleaning or apply directly to bedding. Apply an amount suitable to dry up surface moisture – as a guide approximately 50g or one handful should be spread over 1m².
