Provimi is committed to local agriculture for years to come

Provimi is a world leader in the supply of animal nutrition products and services to meet the needs of livestock producers. It has been at the forefront of its industry for more than 80 years and its team of 450 in-house scientists are challenged daily with developing improved animal nutrition solutions. Constant evolution is at the core of Provimi's activities. Provimi continues to be committed to shaping tomorrow's nutrition while respecting the environment and animal welfare and contributing to food safety.

The Provimi ruminant team in Ireland offers a range of well-established, tried and tested products that producers have come to rely on as part of their feed management. Provimi also brings the latest nutritional developments to the market, supported by its full scientific and technical backup. New and enhanced products developed through the company are trialled through Provimi's network of research farms and laboratories as well as on local commercial units.

Customer support and service is a key factor in Provimi's success. The ruminant team offers advice on products, formulation and manufacture, sales and marketing, after-sales support in factories and on farm.

Provimi's manufacturing facilities in Naas and Kilkenny offer great flexibility and the opportunity to contract manufacture customised products for customers. Provimi is committed to agriculture in Ireland for years to come.

The ruminant product range

Vitamins and minerals

The TMR and Hi-Spec ranges of farm minerals cater for the needs of all ruminant livestock.

Minerals are specifically tailored to animal type (dairy, beef or sheep), production level, and specific requirements (hoof health, fertility etc.).

Amaferm

A natural feed additive that boosts the digestibility of fibre. Amaferm works by providing rumen fungi – the most important rumen microbial group for fibre digestion – with the nutrients they need to accelerate fibre digestion.

Equaliser

A blend of buffering agents and flavours. Equaliser neutralises acidity therefore improving digestion, productivity and health.

LiFT

A package of vitamins and essential cofactors that improve liver function by optimising the liver's natural resources. LiFT supports the liver during the transition period and early lactation. At this crucial time, liver function is of key importance in determining future health, fertility and production performance.

NuStart

A unique combination of essential oils, prebiotics, functional fibres and natural antioxidants. NuStart also includes a precise profile of vitamins and trace elements required by young animals.

NuStart promotes healthy rumen development, encourages intake and improves growth. NuStart can be added to calf and lamb creep feeds. All ProviMilk powders also contain NuStart – used in solid feed and milk replacer, NuStart provides a strong link at weaning time.

ProviMilk range

A comprehensive range of milk powders with options for all types of production systems. The ProviMilk range incorporates the latest innovations in ingredient technology to improve physical characteristics, digestion, and performance.

All ProviMilk powders contain NuStart to promote rapid gut conditioning and improve growth.

Hi-Spec mineral buckets

An established, tried and tested range of mineral buckets, the Hi-Spec range caters for all types of farm animal. Hi-Spec mineral buckets include generous levels of trace elements to balance the nutrition of modern livestock.

Protector Pre-calver

A unique mineral bucket designed specifically for the pre-calving cow. Packed with potent antioxidants, Protector protects the health and immunity of the cow and the unborn calf.
